QRCode Generator

Abstruct

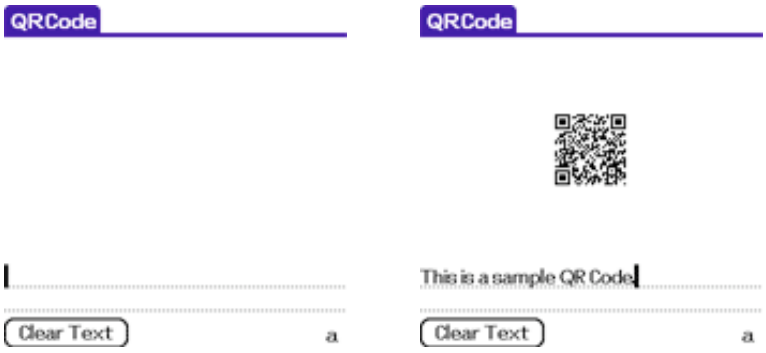

QRCode is the application that create the special 2 dimensional code. QR Code is very common in Japanese mobile phone and these mobile devices have a capability to scan and decode this 2D code.

Download

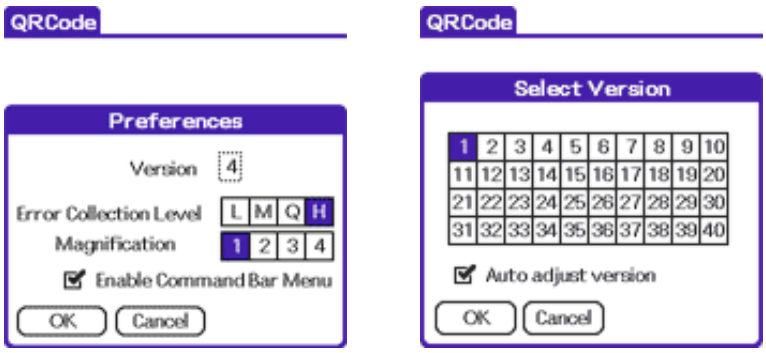

You can download from here.

Usage

Install *QRCode.prc* and *QRCodeLib.prc* on your device. *QRCode* ICON can be found in the launcher screen. Tap *QRCode* ICON and put message in the text field.

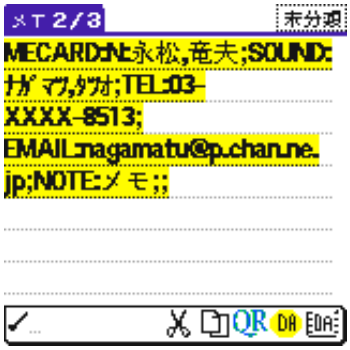

In the preference, there is a checkbox for "Enable Command Bar Menu". With this checkbox, QRCode can be invoked from another application. Before opening a command bar, you need to select a text in the field.

For example, create a memo - **MECARD:N:お名前(姓),お名前(名);SOUND:半角カナ読み(姓),半角カナ読み(名);TEL:電話番号;EMAIL:メールアドレス;NOTE:メモ;;** and select this text in the Memo application. Opening the command bar and you can select QRCode

button. This example creates an address information for NTT DOCOMO phone. For VODAFONE device, use the format - **MEMORY:NAME1:お名前(姓)NAME2:お名前(名)TEL1:電話番号MAIL1:メールアドレス** . For more detail information about format, please refer documents from carriers.

Removal

Delete *QRCode* and *QRCodeLib* from application launcher.
