

Download Adarian Money for Palm OS

Since you are reading this document, that means you have already downloaded and extracted files from the delivery file AMP.zip.

Choose Files to Install to Your Handheld

1. Activate the Palm Desktop software from your computer, click on the **Install** icon located in the icon panel on the left.
2. The Install Tool dialog box pops up (see below). In this dialog box, make sure your HotSync name is selected in the **User** list. Then click the **Add** button.

3. Locate the files **AM_Enu.prc** and **MathLib.prc**, click the **OK** button to add them to the list of files to be installed. These are the main programs.
4. If you are a new user, skip this step. If you are upgrading from any version earlier than v4.0, you need to add **AMUpgrad.prc** into the dialog box.
5. The file **Plugin_DB6.prc** is a plug-in for use with another Palm OS software DateBK6 so that Money can show information in DateBK6's Today screen. If you have DatBK6 and intend to use this function, you should add this file.
6. The file **Plugin_ZL.prc** is a plug-in for use with ZLauncher. If you have ZLauncher and intend to use this function, you should add this file.
7. Although this is not necessary, but it's highly recommended that you install the online help files. They contain useful information and will be very helpful to you. They take about 200KB, but can be removed separately from the main program once you're familiar with the software. Click the **Add** button again and add two files: **AMOnlineHelp.prc** and **AMOnlineHelpDoc.pdb**.

Perform a HotSync

Now perform a HotSync. When the HotSync is complete, if there are no errors in the HotSync log, then the files you just added are successfully downloaded to your handheld.

Run the Program

1. If you are upgrading from any version earlier than v4.0, before you run the main program you need to run the upgrade utility AMUpgrade.prc first. The utility will convert all your databases into v4.0's format. It will give you instructions and messages as it goes, just follow the instructions and read the messages carefully. *Note that only databases in the internal memory are converted; those in the extension memory card are not.*
2. In the Application Launcher, there is icon named Money, that's the main program of Adarian Money. Now you can run it.

Installing Adarian Money PC Conduit

PC Conduit, as its name suggests, is a software that runs on your Windows PC (not Mac) that lets you exchange data between PC and handheld. You need to install it if you want to do any one of the following:

- Synchronize data with **Adarian Money for Windows**. (Adarian Money for Windows is a SEPARATE PRODUCT from the Palm OS version; it's downloaded and sold separately.)
- Export data to files (CSV, QIF) from handheld to your PC.
- Import QIF or OFX files from PC to handheld

If you want to do any of the above, you need to install PC Conduit. To install it, look for a file named **AMConduit.exe** in AM.zip, extract and run it.
